

_panelDescription

Working with your Qube! render farm in the new UI is done using various panel interfaces. Most people won't use all the built-in panels so you can hide away anything you don't use by clicking the panel's 'X' button, or deselecting it in the View->Panels menu. You can move the panels around to suit your workflow, it's also possible to float them. The UI remembers your previous panel layout when you start it again later, floating panels don't open by default but remain floating when you enable them from the View->Panels menu.

When dropping a panel on top of another, a tabbed panel is created as show below as 1. It is then possible to either move the tabbed panel as a group by dragging from the panel's title bar, shown as 2, or you can move an individual panel out of a group by dragging from its tab, shown as 1.

Job	Order	Name	Status	Start
26	1	100-107	complete	2020
26	2	108-115	complete	2020
26	3	116-123	complete	2020
26	4	124-131	complete	2020
26	5	132-139	complete	2020
26	6	140-147	complete	2020
26	7	148-155	complete	2020
26	8	156-163	complete	2020
26	9	164-168	complete	2020

Save your favorite [Layouts](#) and switch between them to best suit your task at hand.
