database_password

Synopsis

`database_password` = *encrypted password*
Sets *password* to the database password for database_user. Use the qbhash command, found in the "bin" folder, to generate the encrypted password

> ⊘ **Warning**
> For backwards-compatibility, the system will also take the password stored in clear-text, but it is recommended to use the encrypted string, for obvious security reasons.

Example

database_password = 0fbc8b129210914f769564cbd30ae5cb4397f9615299ce8d1e1cf065e97bf063

Defaults

"" (empty)
