

supervisor_smart_share_mode

This parameter is one of several that configure the [SmartShare](#) behavior.

Synopsis

```
supervisor_smart_share_mode = mode
```

The mode in which the [SmartShare](#) feature will operate. This can currently be "jobs" or "none".

Values

- jobs - automatically balance Smart-Share expanded secondary instances on a job-to-job basis (i.e., all running jobs will have an equal number of secondary instances).
- none - disables SmartShare.

Example

```
supervisor_smart_share_mode = none
```

Defaults

jobs
