worker_flight_check_path

Synopsis

`worker_flight_check_path` = *path*

The flight check path is used to specify where the Worker should look for programs that run before and after each job (pre and post-flight check). This may be a comma-separated list of paths to specify multiple locations. For details, including how the flight-check path should be structured inside, see Flight-Checks (Pre and Post)

Example

`worker_flight_check_path="/apps/qube/custom/flightChecks"`

Defaults

`$QBDIR/flightCheck`
