

Unable to launch WranglerView on Windows

While trying to launch WranglerView or ArtistView on some versions of Windows, you may see an error similar to:

```
Traceback (most recent call last):
File "qube.py", line 157, in <module>
File "qb\__init__.pyo", line 27, in <module>
File "<string>", line 1, in <module>
File "qb\_qb27.pyo", line 12, in <module>
File "qb\_qb27.pyo", line 10, in __load
ImportError: DLL load failed: The specified module could not be found.
```

We've determined that installing the Microsoft Visual C++ 2010 redistributable (x86) allows the 6.6-x build of WranglerView to run on older versions of Windows.

This is a 4.8 MB download direct from Microsoft, and the same download can be used to uninstall this component should you wish to remove later.
