

WranglerView 6.7 Release Notes

Highlighted 6.7 Features and Changes

Added Autodesk 2016 support

Various performance and stability enhancements:

- * Running Instances view may be hidden to cut down on the amount of data retrieved from the supervisor

- * Log sizes for jobs displayed in job and instance lists, easily highlights jobs with aberrant conditions

- * Large logs can optionally have the middle section snipped to avoid loading too much data in WranglerView

Job run-time environment may be edited

User-selectable filters available for job and worker views, value lists are pre-populated from the database
