Qube 6.5 Release Notes

What's New in Qube 6.5

- **"Show, Shot, Sequence" and user-definable job tags**: provides detailed insight into how farm usage rates are mapped to projects and/or clients
  Supervisor configuration re-read – global resources, configurations and more can occur without a supervisor reload, leading to an increase in uptime
- **App-Finder jobs**: allows a job to be distributed across mixed OS farms
- **Cumulative time tracking**: total job time spent on the farm in CPU-seconds can be revealed by jobs, frames, and retries (even across varying numbers of CPUs)
- **Updated application support**: Qube! 6.5 now works with Autodesk 2014 products, and supports Maxwell Cooperative Rendering with "resume rendering" functionality
