What's New in Qube 6.4

Mac OS X 10.8 Mountain Lion support

Auto-pathing feature does path conversion in jobs can be done on the worker when the job runs, allows for running the same job across different operating systems at the same time

Added Database Check & Repair WranglerView

Added a new job flag `migrate_on_frame_retry`, which, if set, forces a subjob to migrate to another worker if it fails a frame

A new "job_cleanup" script, can help with the automated removal of old jobs and their associated logs. Also can find and remove logs from jobs that have already been removed from Qube.

Add automount support for desktop user mode on Windows

Add support for per-OS environment variables, allows for different envVar values depending on run-time OS
