

# How do I centralize my worker job logs?

One can place all of the job logs (containing stdout,stderr,etc) directly in a central location. This requires modifying the configuration for both the Supervisor and the Workers.

- On the **Supervisor**, open the Configuration GUI. Under Supervisor Settings->Path Settings, set the "Job Log Directory" to a network path.
  - Note: Use UNC paths and forward slashes (/) if on Windows.
  - Note: This can also be manually set directly in the Supervisor's qb.conf file by setting the supervisor\_logpath parameter.
- On each **Worker**, open the Configuration GUI. Under Worker Settings->Advanced Settings, set the "Job Log Directory" to a network path.
  - Note: Use UNC paths and forward slashes (/) if on Windows.
  - Note: This can also be manually set directly in the Worker's qb.conf file (or on the Supervisor's qbwrk.conf file) by setting the worker\_logpath parameter.

See [Writing Job Logs to a Network Filesystem](#) for more information.
