

Qube Locker

QubeLocker is a small application for locking and unlocking slots on an artist's workstation.

1. **Minimize:** QBLocker will run from your system tray, leaving valuable screen real estate to other applications.
2. **Machine and Current Jobs:** This displays the hostname and list of the jobs your machine is running
3. **Slider:** A slider to determine how many slots you would like to lock or unlock
4. **Slots details:** The amount of slots your machine currently has available to Qube!
5. **Buttons:**
 - a. **Purge:**
 - Refresh:** Updates your machines status
 - i. **Checked:** will kill the jobs that are currently running on your machine
 - ii. **Unchecked:** Will wait for the currently running jobs to finish before making the slots available/locked
 - b. **Apply:** Applies the selected slider settings
 - c. **Ok:** Confirms and minimize qubelocker
